Abstract (en)
[origin: EP0724899A2] A locking mechanism consists of a locking lever (3) swivelling on a transverse axle on a base plate (2). The locking lever is for a catch (7) on the support (1) extending beyond the back clamp. The locking mechanism also consists of a support lever which has a support (10) for the catch. The locking lever forms the support lever and is locked by a sprung catch (13) in the separate pivot positions for locking and unlocking and supporting the catch. The base plate forms a bearing block holding the catch between two arms (6).
