Abstract (en)

[origin: EP1182128A2] The infant seat insert for a swimming ring has a rigid annular frame (1) fitting into the ring opening (O1). The frame supports flexible straps (2) which form a seat for the infant placed in the ring. The seat straps form at least two openings for the legs of the infant. A secondary frame (3) forms a support for retaining straps. The frame has a flange (4) to rest on the top of the float.
