Abstract (en)
[origin: EP1182165A1] The present invention relates to a device for the capping of containers, in particular bottles. In particular the present invention relates to a device for capping containers (4) with a crown cork (14), comprising a container support plate (3) and a capping head (2), characterized in that a linear actuator (16) is linked, without the interposition of a cam, either to the said capping head (2) or to the said plate (3) for the reciprocal movement of the capping head relative to the plate. <IMAGE>
