Abstract (en)
[origin: EP1182269A1] Roller door comprises a door body (8) which moves between a closing and an opening position, and a storing device (9) for receiving the door body. The door body is formed as a one-piece hanging part. The storage device is arranged in the vertical direction on the lower side of the door and formed as a winding shaft. Preferred Features: The hanging part is made of a flexible material, preferably rubber and is fixed to the outer casing of the shaft on its lower edge using a fixing strip.
