Abstract (en)

[origin: EP1182321A1] The shutter motor (2) is supported on a plate (1) which also has a housing (3) for a barrel (4). The barrel is operated manually by a drawstring (6) to give an alternating rotating movement which is transmitted to a switch (17) through an eccentrically mounted connecting rod (16). The switch enables a selection to be made amongst orders for Raise, Lower, and Stop .
