Abstract (en)

[origin: EP1182462A2] The method involves computing the parameter corresponding to the field change in the working volume per Amp of current in the additional coil system (D) with  $z = 0$  by taking into account the magnetic fields generated by currents induced in the rest of the magnet arrangement (M,P1), where  $z$  is the distance along the  $z$ -axis ( $z$ ). An Independent claim are also included for a magnet arrangement.
