Abstract (en)

The invention is directed to a device for processing photographic material, said device comprising at least one low volume processing and transport channel which does not include any transport means, wherein the level of the transport liquid is held within the borders of the processing and transport channel. Furthermore, the invention is directed to a processing vessel for processing photographic material, said vessel comprising a low volume processing and transport channel which does not contain any transport means, wherein the level of the processing liquid is held within the borders of the processing and transport channel. <IMAGE>
