Abstract (en)
[origin: WO0068004A1] A composite fabric comprises a substrate formed of a mesh layer of metal cord 1 and a coating 3 applied to the substrate so as to form a continuous sheet adhered to the substrate. The composite fabric can be used, for example, for architectural applications and also for a curtain for a curtain-sided vehicle body or other goods container. In this case the curtain comprises a sheet of the composite fabric, means to suspend the curtain from an upper portion of the container, and means to secure the curtain in place with respect to the container.
