Abstract (en)  
[origin: WO170614A1] The invention relates to a vertical elevator comprising a car enclosure (1) which is connected to a counterweight via at least one traction means (2a), which runs over a diverting device (2). The vertical elevator has a drive (3) which can be displaced upwards and downwards along a fixed vertical operating path. In contrast to the prior art, in which the drive has always been mounted on the car enclosure (1), the inventive drive (3) forms at least one part of the counterweight.
