Abstract (en)

[origin: WO0068531A1] The present invention relates to a method and an apparatus for distributing mortar or the like binding material mix in connection with masonry work. Said binding material mix is held in a hopper (1) suspended above the workplace. From the hopper said mix is first induced by forced action conveyor means (2, 3) to move in a controlled manner essentially horizontally to above a distribution point. The mix is thereafter induced to flow, via distribution means comprising a flexible free fall portion (10, 10a) and material mix spreading means (11) arranged at said distribution means, down to the final destination (17) of the work.
