Abstract (en)

[origin: CA2375191A1] The invention relates to a test system comprising at least one capsomer, at least one stable capsomer, at least one capsid, at least one VLP and/or at least one CVLP and at least one target cell presenting an antigen, especially a B cell, a macrophage, a predendritic cell, a dendritic cell, embryonal cell and/or fibroblast, which has been incubated with at least one capsomer, at least one stable capsomer, at least one capsid, at least one VLP and/or at least one CVLP, in order to detect an antigen-specific immune response in vitro, especially a cellular immune response from effector cells of the immune system, especially B cells, NK cells, preferably T cells, more preferably cytotoxic T cells or helper T cells. The invention also relates to the use thereof in diagnosis and therapy.
