Abstract (en)

[origin: WO0055773A2] The invention relates to the transaction of a business process within an information network which is divided into a proprietary part and a non-proprietary part. According to the invention, a function element located outside the proprietary part and a data flow control element located inside are provided to this end. The invention also relates to a device for carrying out a business process, said device being equipped with an automatic attribute status changer, especially in the form of a timer.
