Abstract (en)
The present invention relates to a detergent composition which facilitates hand-washing and excellent in the dissolubility of the granules and the dispersibility comprising 5 to 60% by weight of a phosphate builder and 10 to 60% by weight of a surfactant, wherein the detergent composition has a bulk density of from 600 to 1200 g/L, and a flow time of 10 sec or less, and has a total summation of a product of a mass base frequency W_i of each group of classified granules obtained by classifying detergent granules by using a classifier and a dissolving rate V_i of each group of classified granules specified in the present invention, which satisfies the following formula (1): $\text{SIGMA } (W_i \cdot V_i) \geq 90(\%)$ and wherein a mass base frequency of the classified granules having a size of less than 125 μm is 0.10 or less, wherein the classifier comprises sieves each having a sieve-opening 2000 μm , 1410 μm , 1000 μm , 710 μm , 500 μm , 355 μm , 250 μm , 180 μm , and 125 μm , and a receiver, determined under the measurement conditions; and a process for preparing the detergent composition. <IMAGE>
