Abstract (en)  
[origin: EP1184709A1] In a framework for eyeglasses the support legs (3) are in engagement with the lens-holding structure (2) through hinge pins (9) mounted rigid with the lens-holding structure (2) or, alternatively, with the legs themselves, and adapted to be coupled with articulation seatings (10). Each articulation seating (10) is defined by a first engagement portion (10a) formed in the respective leg (3) or, alternatively, in the lens-holding structure (2), and a second engagement portion (10b) formed in a covering element (11) to be rigidly engaged in a recess (12) defined in the frames (1). <IMAGE>
