Abstract (en)

[origin: FR2812974A1] The electromagnetic signal transmission circuit has functional models with two for one redundancy. There are waveguides (6) with an input (IN) applied to two modular functions (1) producing a two for one redundancy. The waveguide far end has a short circuit. Probes (8) pass the electric field to the modules, and are placed at multiple quarter wavelengths. Module outputs (01) are connected to a recombination element (12).
