Abstract (en)

[origin: DE19926485A1] A device for adjusting or controlling moisture and/or temperature, arranged in the cooking area of a cooking device, comprising a water circulation device (11) with an adjustable and controllable water intake (12) in addition to a water outlet (14), whereby the water circulation device (11) has guiding elements (20) in the form of longitudinal holes in order to conduct the water flowing therefrom in a specific direction. The steam occurring in the processing area can, for instance, be condensed on said water surface.
