Abstract (en)  
[origin: FR2793708A1] A dispenser comprising a reservoir (10) containing one or more doses of a product, made in the form of a syringe with a hollow barrel (11) containing a piston (40) which seals it when in a state of rest and actuated by a rod (30), is new. A dispenser comprising a reservoir (10) containing one or more doses of a product, made in the form of a syringe with a hollow barrel (11) containing a piston (40) which seals it when in a state of rest and actuated by a rod (30). The outlet end of the dispenser has an aperture (13) and an elastomer nozzle (50) with a stopper which seals the outlet when in a state of rest. The syringe and nozzle are fitted into an outer housing (80) incorporating an outlet (20) and an energy accumulator which ensures the dispensing of a full dose each time the piston is actuated.
