Abstract (en)
[origin: FR2793707A1] A dispenser comprising a body (10) with an outlet, a reservoir (20) for one or more doses of a liquid, and a piston (25), is new. A dispenser comprising a body (10) with an outlet, a reservoir (20) for one or more doses of a liquid, and a piston (25). It has an elastic element such as a spring (30) which interacts with the reservoir or the piston, and a manually operated compressor (40) for the spring. The spring can be locked in a compressed position and then released by a catch (50) to discharge a dose of the liquid. The reservoir is preferably made of glass and the piston is made of an elastomer.
