Abstract (en)
[origin: WO0071296A1] The invention aims at providing a vibrating device (1) that can be produced in an economical and simple manner, used for different purposes by optionally retrofitting said device and not requiring any special knowledge for its utilization. According to the invention, the vibrating device (1) comprises a vibrating unit consisting of a substantially flat vibrating element (2) and a vibrating drive mechanism (3, 4, 5) connected to said element, in addition to a handle consisting of a lid (12) covering the vibrating drive mechanism almost completely, wherein said lid (12) is mounted in a vibration-free manner relative to the vibrating element (2) by mounting an intermediate damping element.
