Abstract (en)
[origin: DE19926784A1] The invention relates to a device for controlling an apparatus, for example an aircraft, an aircraft simulator, a robot or the like. Said device comprises a handle (10) which can be rotated about two axes (A, B) that are perpendicular to one another. The handle (10) pivots about a fulcrum (P) which substantially corresponds to a point of intersection (S) of the axes (A, B).
