Abstract (en)
[origin: EP1186260A2] The invention concerns to the conception of an anatomical pillow manufactured in polyurethane and covered by a white colour cotton tissue. Its surface is formed by wavy grooves (1) and its lateral, posterior and inferior sides are smooth (2, 3, 4). In its surface, emerges a relief (5) that makes possible to its user, when in a vertical position (figure 1), to lay suitably and uniformly his lombar region and in an horizontal position (figure 2) to support suitably and uniformly the cervical column zone. This pillow permits to avoid the discomfort caused by common pillows, mainly when used by people who must lie in bed. <IMAGE> <IMAGE>
