Abstract (en)

[origin: EP1186508A2] The impact energy absorption device is particularly for a passenger traffic rail vehicle and has at least one buffer at least one end of the vehicle at at least one absorption component. The buffer and/or absorption component are between two adjacently coupled vehicles. They are outwardly movable in travel operation and are secured permanently in the position away from the vehicle. The buffer and the absorption component are both exchangeable. At least one absorption component is arranged on at least one buffer.
