Abstract (en)  
[origin: EP1186722A2] The stand has two or more sales areas, positioned next to each other within an enclosed space and turning continuously within that space, esp. a circle. During turning, the sales areas (8) are slightly moved relative to each other in a vertical direction. The vertical position of each sales stand can be adapted to the ground (13) surrounding the market stand (1). The stand has a stationary core area (2), and a connection path, moving with the sales areas, between the surrounding ground and the floor area of the stationary core.
