Abstract (en)

[origin: EP1186833A1] A cooking appliance comprising: an atmospheric burner (4), a thermal receiver (13), a chamber (7) for distributing the gas/air mixture to the burner (4), and passages for the combustion products to enable their heat to be utilized for cooking, the combustion products passing through a space (14) between the burner (4) and the thermal receiver (13), said space being bounded laterally by a spacer (12) which at one end supports said thermal receiver (13) and which along its extension is provided with passages (12e) for the combustion products such that they leave these passages with a component of their movement substantially perpendicular to the burner (4) and to the thermal receiver (13). <IMAGE>
