Abstract (en)
[origin: WO0172579A1] The invention relates to a boat (1) of a rigid construction which can be equipped with an element (2) of an inflatable boat comprising a bow (2a) and a rigid upper stern (2b). According to the invention, both parts (1, 2) are joined by inserting and/or by fastening the bow (1f) of the rigid boat (1) in a corresponding seat located on the inner side of the bow (2a) of the inflatable part (2) and by fastening and/or placing a fixed or displaceable stop (2c) onto the stern (1d) of the rigid boot (1) or by fastening the upper edge of the stern to the rigid upper stern (2b) of the inflatable part (2).
