Abstract (en)  
[origin: WO0181768A1] The invention relates to a delivery pump that is configured as a side channel pump. In said pump, a running wheel (2) is held on a shaft (3) in such a way that it can pivot in a limited manner about an axis that runs transversally to the shaft (3). This allows the running wheel (2) to adapt to the tolerances of a housing (1), thus preventing the running wheel (2) from abrading on the housing (1). The noise level of the delivery pump is therefore negligible.
