Abstract (en)  
[origin: WO0073981A1] A product which is intended to be used in connection with the recording of information has a surface (2) on which there are a plurality of information alternatives which each have an associated code area. The surface is further provided with a two-dimensional position code (4) which codes coordinates for a plurality of positions on the surface; which is unrelated to the information to be recorded and which enables recording of a desired information alternative by reading the position code for a position in the code area associated with the desired information alternative. The product can advantageously be used in restaurants, when booking trips, making hotel reservations and the like. A system for recording information, as well as a method and software for making the product are also described.
