Abstract (en)  
[origin: WO0076193A1] The invention concerns a communication method between at least two users, via a computerised communication network (14), in particular of the Internet type, each user being provided with a telephone (26i, 26j) of a telephone network (12), each telephone being connected, via a local loop (161, 162,...,16n) of the telephone network, to a call centre (181, 182,..., 18n) managed by a telecommunication operator. Said method comprises steps which consist in establishing a link, via said Internet-type telephone network, between said call centres and establishing a communication, via the telephone network (12), between the two users. The users can then decide to request the call centres to switch the communication onto said Internet-type network.
