Abstract (en)
[origin: US2002023320A1] A clasp for a bracelet, which makes it possible to bring together and to fasten together the two ends of a bracelet in a closed position and to separate these two ends of the bracelet in an open position, includes two pairs of interchangeable linkage members (7, 8) for connecting the ends of the bracelet to the body (1, 2, 3) of the clasp, one of said pairs of linkage members (7) being designed for connection to the ends of a flexible strap and the other (8) for connection to the ends of a band comprised of rigid links. Each linkage member (7, 8) is connected hingedly to the body (1, 2, 3) of the clasp by a locking means which can be operated without the use of a tool.
