Abstract (en)
A calibration device for extruded sections comprises at least two calibration plates (10) parallel to one another at a distance apart such as to form a gap (1) through which an extruded section (11) can pass, each calibration plate comprising cooling means for cooling the plate and vacuum-forming means for creating a vacuum in the gap (1), the calibration device comprising air-intake means for introducing air into the gap (1), said means being designed to form air cushions or pads between the surfaces of the extruded section (11) and the surfaces of the calibration plates (10). <IMAGE>
