Abstract (en)

The invention is a new, ready-to-use element in one piece or assembled, preferably made of plastic or metal, to which the terminal sections of the water supply and waste water drain pipes of sanitaryware are applied, in order to facilitate the correct laying of the pipes and of the connections. The element comprises two or three U-shaped channels parallel to one another and some cross elements that join the U-shaped channels, wherein the width of the lateral U-shaped channels is such as to allow two water supply pipes to be housed therein and the width of the central U-shaped channel, if provided, is such as to allow a waste water drain pipe to be housed therein. <IMAGE>
