Abstract (en)
[origin: EP1189178A1] A swivelling push-through door wing (3) is held on a frame (2). An isolating booth (16) is linked to open vertical edging on the door wing. In an isolating operation the isolating booth consists of a first partition (14) leading away from the frame's surface and a second partition (15) set apart from this surface. As the door wing opens as far as a first opening angle, one person only gets into the booth.
