Abstract (en)
[origin: WO0076376A1] A bedding system (1) comprises a "sock" sheet (2) which at least partially envelopes a mattress (3), the sock sheet (2) being sufficiently loose-fitting to provide sufficient room for an occupant to lie between the sock sheet (2) and mattress (3). The upper surface (2b) of the sock sheet (2) has an arrangement of stud fasteners (4) which facilitate the attachment of additional blanket layers (5) if so desired. The length of the sock sheet (2) is adjustable to accommodate different sizes of occupant and may also have a mesh portion adjacent its bottom end.
