Abstract (en)
[origin: WO0073594A1] The invention relates to a compactor, which is particularly intended for crushing material and compacting the surface layer by driving the compactor. The compactor includes a base with rollers (11, 11') arranged in both of its chassis sections (10, 10') and hydraulic motor units (13) arranged in connection with the rollers. The compactor also includes an engine (16) with hydraulic pumps (17, 17') connected to it, which are connected to the hydraulic motor units (13) arranged to rotate the rollers (11, 11'). There are two hydraulic pumps (17, 17'), which are arranged in tandem as a direct continuation of the engine (16). In addition, both hydraulic pumps (17, 17') are arranged to rotate the hydraulic motor units (13) of different rollers (11, 11').
