Abstract (en)

[origin: DE10010136A1] The device has a first linear guide (5) for length (1) measurement and/or a second linear guide (6) for width (2) measurement. The guide(s) is movable along a longitudinal and/or transverse direction of a support (3) and has at least one optoelectronic sensing head (7) with a signal conducting connection to an evaluation device (8) for converting the head signals into length and/or width and displaying them. Independent claims are also included for the following: the use of the device with the human foot.
