Abstract (en)  
[origin: WO0074193A1] A user support system (30, 38, 40, 42) for automatically providing user support for software applications, system software or computer hardware is provided. The system (30, 38, 40, 42) may detect various computer problems, such as a software application crash or error message, a system software crash or error message or a computer hardware error message. The client computer (32) generates information when the problem occurs. The information is communicated to the support system (30, 38, 40, 42) which then provides a solution.
