Abstract (en)
[origin: WO0105190A2] The invention relates to a hearing-aid, worn behind the ear, comprising a housing which has a housing shell, an electronic circuit and an energy accumulator. The invention is characterised in that the hearing aid is constructed from the housing shell and a multi-functional plate, which is known as a face plate and which is adapted in form to the housing shell. The circuit and an access opening for the energy accumulator are provided on the face plate.
