Abstract (en)
The shower booth comprises a single door (7) with a shaped side border (3) that, when the door is in its closed position, defines an edge of the booth beyond which the door links up with a side wall (4). The door (7) is connected to the booth by means of a linkage system (8, 80) adapted to allow for a rotary-translatory opening motion of the door without any mechanical jamming and with a reduced dynamic encumbrance thereof.
