Abstract (en)

[origin: EP1190927A1] The device for the adjustment of a locking rod (2) relative to a points blade (23) has a clamping component (10) guided in a first recess in the head of the locking rod, whereby the clamping component has an opening for the guiding of the locking rod. The opening on one side form-locks with the locking rod and the position is fixed by a locking screw (14). The locking rod is constructed as a threaded rod (5) in the region of the clamping component, and the opening in the clamping component is oval by way of two offset semi-circles.
