Abstract (en)

[origin: EP1190971A2] The device for the adjusting of feed units for printing presses processing flat sheet copies has additional processing units in which are housed shafts (16) with stationary elements (25) guiding the individual feed belts and upon which are mounted constantly pretensioned elements (20) which are movable symmetrically in relation to the center of the machine and which drive and guide the individual feed belts. Independent claims are included for a paper processing machine, for folding apparatus, and for a rotary sheet-fed press, all with facilities for adjusting the feed units for flat sheet copies.
