Abstract (en)

[origin: EP1191178A2] The security strip (1) for a surface edge, to signal when a door or the like is opened, has a number of balls (2) etc., in electrical contact with each other within a flexible tube (3). The balls (2) can be magnetized to cling together, or pulled together by an expander cord (5) where they lie together under their own weight. The ball contacts (2) can be partially spherical (2a), with flattened contact surfaces. The flexible tube (3), of a thermoplastic elastomer or foam rubber, can have a softer inner core.
