Abstract (en)

[origin: WO0185478A1] The invention relates to an articulated rod element (4) for a vehicle roof that can be adjusted between a closed position and an open position. Said articulated rod element comprises a center support (5) and one joint element (6) that is fastened on the front face of said center support (5). In a simple and cost-effective embodiment of the inventive linkage, the center support (5) and the joint element (6) are linked in a form-fit manner.
