Abstract (en)

[origin: WO0065176A1] The invention relates to a depot and to a method for operating a depot, comprising input stations (3, 4) with cells (9), output stations (5, 6, 7) and transfer means such as shelf operating devices (1, 2) and displacement means (12), which are intended for carrying out the necessary steps for storing and retrieving articles in an operating mode based on reciprocal division of labor, in such a way that partially simultaneous execution of said steps is effected thereby saving time and enabling good utilization of space.
