Abstract (en)

[origin: WO0184010A1] The invention relates to a pneumatic spring system (1), comprising at least the following components, namely air-spring bellows (2), an air-spring cover (4), an air-spring piston (7) and an external guide (13). The inventive pneumatic spring system (1) is characterized in that the external guide (13) consists of a plastic material with a solid support embedded therein.
