Abstract (en)
[origin: WO0063763A1] An apparatus and method is disclosed for providing a user (106) with task-specific information that includes a portable instruction system that may be worn by a user (106), and includes, a computer (102) sufficiently lightweight and designed to be worn by a user (106) to which a memory has been connected. The system includes a display device (108) that can receive display signals from the computer (102) for visual display to the user (106) and an input device (122) by which the user (106) enters commands to the computer. An instructional program is provided that the computer (102) accesses and stores in a memory in response to a user (106) command and displays information concerning a task to be performed by the user (106) on the display device (108) in response to commands from the user.
