Abstract (en)

[origin: WO0156352A2] The invention concerns a method and a device for electronic payment comprising an operation which consists in opening a communication session between a first user terminal and a trader server, on a first communication medium, such as Internet. During the communication session, the user terminal prepares a single-use payment certificate. The user receives, on a second terminal, such as a mobile telephone, a confidential information such as a password and transmits it to the first medium. The correspondence between the information transmitted to the second terminal and that transmitted by the first terminal is verified, and, in case of conformity, the payment is validated.
