Abstract (en)

[origin: WO0165503A1] The invention relates to a goods lock, comprising a lock channel (1), with an inlet opening (10), an outlet opening (14), a transport mechanism, for transportation of an object (15), in the lock channel (1), to the outlet opening (14) and an opening and closing mechanism (5), for the outlet opening (14), with which the outlet opening (14) can be opened for dispensing objects (15). A first closing element (9, 9') may be introduced into the lock channel (1) and displaced to the outlet opening (14), which keeps the inlet side section (1a) of the lock channel (1) separate from the outlet side section (1b) of the lock channel (1), such that, when the outlet opening (14) is open, nobody nor nothing can gain access to the inlet side section (1a). The invention further relates to a method for the dispensing of goods using the above goods lock.
