Abstract (en)
[origin: WO0076268A2] The invention relates to a hearing aid device, comprising a signal processing unit (14) and at least two microphones (1, 2, 3) which can be coupled together to form directional microphone systems of a different order, whereby microphone signals (11, 12, 13) transmitted by directional microphone systems of a different order can be coupled together according to the weighting of the frequency of the microphone signals. The invention also relates to a method for operating a hearing aid device of this type.
