Abstract (en)
[origin: EP1193180A1] An inner space(60) is formed inside the box, the side walls of which are formed by first(36) and second(38) glued flaps. A first wall element(30) forming the underside of the inner space is connected to the rear wall by a first glued flap fold line(22), the width(BK) of which is smaller than the width(BS) of a side wall element(18), and formed on the first glued flap(20) by a second glued flap fold line(34) so that in the folded state of the box the first wall element is parallel with and at a distance from the rear wall. The first glued flap is formed on the first wall element by a glued flap fold line(40).
