Abstract (en)

[origin: EP1193186A2] Apparatus has sleeve (11) open at one end (12) to receive a container (1) and its other end has openings (21-24) extending from its center and a peripheral airtight lip (26). When a container is in the sleeve, it and the lip together form a suction cup for attaching the apparatus to a support surface. Independent claims are included for the following: (a) A container for a cosmetic product, etc fitted with the above apparatus. (b) Making the above apparatus by injection molding, the injection point being at the geometric center of the base. Preferred Features: The base has three or four identical openings.
